A few words from chairman of the paper program committee

It is my great honor and pleasure to serve you as chairman of the paper program committee of IAES19. In the history of the symposium series that has continued for almost 40 years, it is recognized that a wide range of topics spreading from fundamental studies in laboratory to structural testing in field have been always covered in the proceedings. One of the main purposes of the series has been to offer all the symposium participants an occasion to review and discuss about what have been

done so far and to learn what can be done in future. I believe that the symposia have always provided you with very exciting and stimulus program to know and learn about new development in AE studies and applications. The paper program of IAES19 will follow the same policy as the previous symposia. It will consist of some twenty sessions, covering every kind of topics in the AE research and applications. In IAES19, special emphasis will be placed on sessions of “AE research of advanced materials”, “Manufacturing and process monitoring” and “Code and standard”. Please come and join IAES19 to share this precious time with AE friends from all over the world.
